GNU nano 9.0 /etc/ssh/ssh_config

Host *
KexAlgorithms +diffie-hellman-group1-sha1
HostKeyAlgorithms +ssh-rsa
PubkeyAcceptedAlgorithms +ssh-rsa
MACs +hmac-sha1,hmac-sha2-256,hmac-sha2-512
This is the ssh client system-wide configuration file. See
ssh_config(5) for more information. This file provides defaults for
users, and the values can be changed in per-user configuration files
or on the command line.

Configuration data is parsed as follows:
1. command line options
2. user-specific file
3. system-wide file
Any configuration value is only changed the first time it is set.
Thus, host-specific definitions should be at the beginning of the
configuration file, and defaults at the end.

Site-wide defaults for some commonly used options. For a comprehensive
list of available options, their meanings and defaults, please see the
ssh_config(5) man page.

Include /etc/ssh/ssh_config.d/*.conf

Host *
